# innovative cashless payment system

## New Generation

ZIP is a new generation cashless payment system, based on contactless technology, which allows the purchase of products or access to services by using a key or card instead of cash. Transactions are deducted from credits or allowances stored electronically. At the heart of the user-friendly system is the contactless key or card that offers much improved reliability since no actual contact is generated while making a transaction. Maintenance is not required since there are no mechanical parts in the reader and the key will not deteriorate with wear or dirt build-up.

## Uniwell

Two models are available. Both our flagship EPOS terminal and its stable mate provide flexibility and accountability. Both are able to utilise bar code readers for ease of use, Dallas key kits for quick and effective log on of clerks and comprehensive back office solution software packages, providing detailed operator analysis, flexible reporting and management control plus many others features.

## Experience Many Benefits

ZIP is a simple and user friendly system which combines cost effectiveness with ease of use, and generates a host of benefits such as:

- Increased profitability
- Increased sales – more impulse purchases
- Cash collected in advance of product sales
- Reduced vandalism
- Reduced coin thefts
- Improved hygiene and security
- Greater accounting accuracy
- Faster transactions
- No machine coin jams
- Smoother all-round service

## Simple Efficiency

There are various options to load credit onto your key or card. Users can gain credit by inserting their key or card into a ZIP reader fitted to a vending machine and inserting coins into the coin slot. Credit can also be added via wall mounted revaluation units which are available with coin only or coin and note acceptance. The loader plus can also allow selected user to add credit after entering a PIN number followed by the amount required. Credit loaded in this manner would then be deducted from payroll.

## Sharp

This simple to use EPOS solution is an excellent entry-level system which provides basic functionality.

By using ZIP as part of a catering facility you can enjoy:

- Higher throughput rates and hygiene standards – removing the need to handle cash
- Increased accuracy and security when reconciling sales – eliminating incorrect change issues
- Ability to control various discount levels applicable to various groups, such as staff and contractors
- Detailed recording of all sales and analysis of products sold – improving stock control
- Control of free meals, subsidies and allowances – perfect for corporate hospitality

Choose ZIP for a flexible, reliable and easy to use cashless operation.

## System Management

ZIP systems can be fully managed using a PC interface. Both keys and cards can be programmed at the unit, whilst sales audits can also be downloaded all at the touch of a button via a standard computer. Audits are available in standard and extended formats via a Data Retrieval Key or more advanced Maxi Key for greater detailed information.

## Catering Solutions

ZIP can be much more than just a solution for cashless vending – its use can easily be extended for catering and retail payments. ZIP provides an economical and efficient payment method and offers higher throughput rates, increased accuracy and control. ZIP can be linked to existing compatible EPOS terminals or we can tailor individual solutions to suit all locations and requirements from the range below.
